Wxcvbn Tutorial

This is a tutorial for WxcvbnProject. It should give you some general understanding of the way it works and what you can do with it.

Create your first *Action*

- Go to the Action List : http://*$url*/wxcvbn.php?form=wxcvbn_view_actions
- Click on the *New action* link, under the form.
- Fill in:
  - ActionID: *tiki_view_users*
  - SQL: *select userId, login, realname, homePage, country from users_users*
  - Dim: *2*
  - Title: *Tikiwiki - View Users*
- If you want to test this action, go to http://*$url*/wxcvbn.php?form=tiki_view_users ... It should display the list of tiki users 😎.

Create a *View User* action

- Go to the Action List : http://*$url*/wxcvbn.php?form=wxcvbn_view_actions
- Click on the *New action* link, under the form.
- Fill in:
  - ActionID: *tiki_view_user*
  - Webvars: *user*
  - SQL: *select userId, login, realname, homePage, country from users_users where user='?'*
  - Title: *Tikiwiki - View Specific User*
  - Dim: *1*

Create a *Details* link from *View Users* to *View User*

- Go to the Action List : http://*$url*/wxcvbn.php?form=wxcvbn_view_actions
- Click on *Details* near action *tiki_view_users*
- ok... here you should be able to edit the link, but I didn't make any action/templates for that yet... The idea is that you create a 1D link to link from every row of the tiki_view_users action to the tiki_view_user action with some parametres... For now, you have to edit the db manually. Studt the Edit Action to complete this tutorial. Sorry for that, more info in a few days...
