

bbcode

i want to paste bbcode into tikiwiki and see how it will look like.

i searched a lot so far, but found no info how to enable bbcode as input format.

but it seems that there is some logic around for that.

while searching i found:

http://www.ipbwiki.com/lpb_2.1:Using_BBCode_Parser

Class that parses BBcodes for PHP:

<http://www.christian-seiler.de/projekte/php/bbcode>

update:

i cloned wikiplugin_code.php to wikiplugin_bbcode.php and will try to implement the class.
