# tiki.org Teams and Social Networking Dogfood

This page is an archive of ideas

This page is to list all wishes for [Teams](#) and [Community Building Team](#), which we hope to get for [Tiki10](#) and test regularly on [http://next.tiki.org/](http://next.tiki.org/) Many of these are configurations. For the ones that can't done within the next few week, they will be converted to proper wishes on dev.tiki.org

# Get to know people

- Make it easy to see who is involved in what, what they did,

# Contacting the right people

- Without risking spam
- [http://dev.tiki.org/wish2302](http://dev.tiki.org/wish2302)

# Starting Local User Groups

- ~~We detect that you are in this city / country, please confirm~~ "To my location"
- Country picker doesn't work at [https://tiki.org/tiki-register.php](https://tiki.org/tiki-register.php)
  - It's possible to type an invalid Country name

# Starting special interest groups

# Making subdomains

# per country/language/topic

- Areas Perspective Multi-domain dogfood

# 1-liner for group membership

- Comment line/box for when someone joins is added to a group
  - This is an explanation of the reason person joined, what there roll is, etc.
  - http://tiki.org/Lists+of+members+of+all+Teams would look more like WhoWhat but is still dynamically generated. People could indicate they want to "Lead", "Help", "Follow" etc.
  - Would be great also to list languages for Team i18n
- This info should also be part of the notification email when someone is watching a group
  - And in this notification email, please also add who added the person to the group

# Not categorized

- Users can send internal messages to themselves, which is weird
- tracker8&sort_mode=f_123_desc -> country filter is not working
- List of all UserPages, split per country
- Lists of members of all Teams
  - Should have link to UserPage if there is one, and option to show country flag
- The "assign" time/date here http://tiki.org/tiki-admingroups.php?group=Team%20Security&cookietab=2 is wonky
- How could I give tiki_p_broadcast to a user for his own group, but not for any group, especially Registered and Team Developers?
  - Easy way to message group (internal message system or email) (for individuals, it should already be OK)
- Make Developers map better
  - List users per country would be nice
  - Make tiki-user_preferences.php?view_user= less ugly when no lat/long has been picked
- diff_style= is there twice
- SPAM prevention
  - http://www.mediawiki.org/wiki/Extension:QuestyCaptcha
  - Spam
- PluginMemberList: link to username link instead of user number Lists of members of all Teams
- Group member watch send emails when user is added/removed via Lists of members of all Teams. Nice: But could we know who added/removed and have the 1-line message in the mail?
- We want group members to receive such notifications of changes to their group

# Code to test in 10.x

~~Need to activate: user_in_search_result~~ Done, but next is a need to fix re-indexing.

No results for query.
