

Tiki 1.9.1 and 1.8.6 released!

Release Voice - 22 Aug 2005 05:44 GMT-0000

After long hours of intensive fixing/testing/fixing, two new versions of TikiWiki are now available on Sourceforge: version 1.8.6 for the 1.8 -Polaris- branch, and 1.9.1 for the 1.9 -Sirius- branch.

These 2 releases include fixes for recent major security flaws (some disclosed, some not yet). The 2 recent XMLRPC flaws have been corrected. (<http://phpxmlrpc.sourceforge.net/>)

So, consider upgrading as a REALLY IMPORTANT initiative if you don't want any security surprise (even if some flaws only concern some optional features).

As always, Tiki releases involve a massive number of changes from one version to the next. Thank you to all the developers, testers, translators and documentation writers.

1.8.6 -Polaris- > 94 commits since 1.8.5, 7 months ago.

1.9.1 -Sirius- > 685 commits since 1.9.0, 4 months ago.

1.8.6 -Polaris- is considered very stable/mature. No new features are added. Only bug and security fixes. The 1.8.6 involves no database change compared to 1.8.5 so upgrade should be painless. Please see [ReleaseNotes186](#).

1.9.1 -Sirius- is considered stable/testing. 1.9.1 includes a lot of new stuff and a lot of bugfixes. Please see [ReleaseNotes191](#)

Thanks, you all the people that helped in the release process, and in particular the interactive release support on irc that involved mose, marc, amette, toggg, sylvie, redflo and all others.
