

## Announcing the Release of Tiki 6

Rick - 10 Nov 2010 02:37 GMT-0000

The Tiki Community is proud to announce the release of Tiki 6. This version of Tiki Wiki CMS Groupware represents hundreds of hours of work by dozens of members of the Tiki Community. Nearly 50 developers contributed more than 1,500 code changes for this release.

In addition to countless tweaks and updates, Tiki 6 includes several new, key features:

- Extensive re-work and improvements to the Tiki blog, comments, spreadsheets and tracker features
- Batch functions (via cron jobs)
- Introduction of re-Captcha
- Expanded support of ccLite community currencies
- Integration with social networks such as Facebook
- Improved WYSIWYG support
- and much, MUCH more.

For complete information on all of the new features and functionality in this release, see <http://doc.tiki.org/Tiki6>.

Tiki 6 has been designated as the Long Term Support (LTS) version, replacing Tiki 3 LTS. Tiki 3 will reach end of life when Tiki 7.1 will be released (planned for April 2011). See the Project Roadmap for details.

You can download Tiki 6 directly from SourceForge. Refer to the Tiki 6 release notes for additional information.
