My thoughts on Cypht Webmail

Marc Laporte - 07 May 2024 22:50 GMT-0000

Over the last 5 years, I have become increasingly involved in Cypht, an Open Source webmail client.

This project is awesome! It permits me to:

- aggregate emails from various sources in one nice list
- search throughout multiple accounts
- move emails to the right account (work vs personal vs volunteer, etc.)
- automate email management with Sieve filters
- all via a web interface, so I have the same experience on all my devices (mobile or desktop)

Cypht has become Tiki's webmail:
https://doc.tiki.org/Cypht

Why Tiki picked Cypht over the more popular Roundcube:
https://doc.tiki.org/Roundcube-vs-Cypht

Cypht within Tiki has many even more advanced features:
https://doc.tiki.org/Email-filters
https://doc.tiki.org/Calendar-Invitations-by-email
https://doc.tiki.org/Email-folders-Tracker-Field

Many more developments are planned for Cypht version 3.0:
https://github.com/cypht-org/cypht/milestone/4

This is further in the future, but I would like the system to learn from my manual operations, and propose things: https://doc.tiki.org/Machine-Learning

I urge you to join us!
