

TikiWiki 1.8.2 - Polaris - Security Release!

Marc Laporte - 11 Apr 2004 21:21 GMT-0000

1.8.2 addresses some security problems in TikiWiki mainly Path Disclosure, XSS and improved CSRF routines.

Special thanks to gulftech.org

*The TikiWiki Devel team have addressed these issues, and updates are available at their official website. I was VERY impressed with the way these guys handled the situation. Due to the size of the project, and the way some of these issues spanned across seemingly hundreds of files there was a great amount of work to be done.*
