

Tikiwiki.org under 1.9 pre-release

mose - 19 Jun 2004 11:28 GMT-0000

Accordingly to our secular tradition about DogFood, I migrated tw.o (tikiwiki.org) website to 1.9, to make it a perfect ground for an exhaustive quality process in 1.9 release cycle. That energy has a price and I hope you will bear the inconvenience of that more unstable ground. Help us to make it firmer !

The 1.9 migration will bring many new possibilities for tikiwiki community. We now have multilingual (thanks sylvie !!), community scores and friendship linking, more edu-oriented tools from the work of George and Dennis, mutated trackers by mose, categ perms by teedog, jukebox by damian, and many others (as we are now 235 community members from which 104 already have committed on cvs).

The first 1.9 release candidate will follow in next hours, being known that it will be a work version to prepare the final 1.9 release. That preparation work will be possible because of the feature freeze that will be enforced during the process.

The feature freeze means that no new feature should be included unless exceptional case, so we can focus on perfecting existing ones. The preparation will take place on a new cvs branch named BRANCH-1-9, and the cvs HEAD then will be now known as future version 1.10

So, now you can test 1.9 on tikiwiki.org, find bugs and/or fix them !

(The trackers on dev.tw.o are not yet operational but that won't be long to be sorted out)

cheers,
mose
