

TikiWiki 1.8.4 re-packaged

Damian Parker - 12 Aug 2004 03:48 GMT-0000

Due to a large number of reports of the 1.8.4.zip package being corrupt, tonight it was repackaged and uploaded again to SourceForge. Within the next couple of hours it should have populated around the mirror sites.

If anyone is having trouble with any of the other archives, please comment this article and I'll get them repackaged and sent up to our project page again.
