Cinsi, the farmer game (TikiÂ module)

PAGE IS OUTDATED Game has greatly improved: you can buy predators (foxes, wolves, ...), pay hunters to defend your fields, there is an offer/demand system, Tobin tax, levels 😎...

As I wanted the users of a tiki site I set up to come more regularly, I wrote some Tikiwiki module. It's a game, simcity like, where you have to build a farm, building, fields... You have then to harvest your fields, take your eggs daily, milk the cows... Naturally, it is multi-user (all farms are on a common land)...

You can test it by logging on http://labrouette.webheberg.com. A menu should appear on the left side. For the moment, it is only in french, but I hope to translate it or get it translated. If you don't speak french but want to see it anyway, click on *Jouer Ã cinsi* on the *Cinsi..* menu, then click on the link *Cinsi, le jeu des vrais bourrins*.

I put all the necessary files in attachment. If there is interest, I would like to develop it further as an opensource module for Tiki... By the way, the module is still in development, so it is evolving, day after day, but I don't upload the source daily... Do you think this should be included in standard distributions of tiki? Let me know (by mail, if possible - see below)...
