

What is Ella?

Ella is a little Jabber bot Ive been working on for some time. She is now suitably stable enough to be let loose with you people, the Tikiwiki Community!

Ella is setup and now linked into doc.tiki.org and tiki.org database with either a doc find or tw find command, you can search and get usable results including page descriptions!

Due to a limiting problem in class.jabber.php you need to get Ella to initiate the authorisation requests. If you add ella to your roster she wont respond. To bypass this Ive written a small Mod and installed it on doc.tiki.org

Please see <http://doc.tiki.org/Ella> for details on how to get access to her.

Let me know what you think! Suggestions for improvements are more than welcome.
