# Homework select box under admin>features unselectable

- What I did:
    - Updated installation files from tiki1.8.3 to tiki1.9rc2 recently
    - Updated mysql ddbb from 1.8 to 1.9 through tiki-install.php utility
      - I got some error after updating ddbb, related (as far as I remember) to some wrong paths needed to install homework tables into ddbb. As far as I remember, it seemed to search for files under directory tree of tiki (I guess), under a wrong subdirectory which name matched the name of the database (but I don't have any directory with such a name). I kept on going, to try update to 1.9, and everything seemed fine.
  - What's the problem now:
    - I follow the steps at RecipeHomework, but I cannot succeed while I attempt to check "Admin>Features>Homework"; this select box doesn't turn on (tried 3 times, refreshing also, etc.).
    - I cannot see the "Homework item" on the application menu
-
