

With the new TikiBot feature (present in 1.8.3) called Irc Hook, I propose a connection between our IRC channel and wiki pages. This page will be a way to thread data especially noted on IRC.

If this becomes a real mess... well, let us see what happens.

The idea came from development of [chumpbot](#), which is based on an original idea by Bijan Parsia, who wrote a bot in Squeak (Smalltalk) called DiaWebLogBot. Les Orchard modified chump to [chompbot](#), which [jcwinnie](#) implemented on #tikiwiki as tchmp. [UserPagemose](#) then added the Irc Hook feature to TikiBot after seeing a similar approach used at <http://udoo.org/mamading>. And, the rest, as they say, is his story.

This page is a collection of rants and quotes from #tikiwiki on irc.freenode.net.

IrcHook

and it's LGPL !

it's a set of PHP classes that generates simple StarOffice/OpenOffice.org Writer documents.

nice thing we need it : <http://gayuba2.datsi.fi.upm.es/~jmsanchez/>

Integration of Knowledge Management and e-Learning :

<http://www.i-know.at/kmel/>

The 4th Int'l Knowledge Management Conf. has an e-learning track :

http://www.i-know.tugraz.at/conference/i-know04/iknow04_home.htm

People switching from Movable Type are overlooking tiki. "Well, I?m just pissed off at the way they?ve handled this whole thing and I?m going to move my blogs to Wordpress/Drupal/Expression Engine/Blogger/Radio Userland/Live Journal/pMachine/Note Pad and FTP" : http://www.jayallen.org/comment_spam/2004/05/the_collective_deep_breath

I'm not a freak, I am differently brained :

<http://www.plastic.com/article.html;sid=04/05/10/01092060>

blank page syndrom is often due to memory limit in php.ini

Pan European Portal Conf — 18-20 Jul — Nottingham cf. Use of Portals in Higher Education : <http://www.nottingham.ac.uk/pepc2004/>

Soupy rocks ! ;)

bloggin' on irc just rocks !

CADDIE.NET Portal Factory — We believe that a service oriented architecture leads to systems that are Customizable, Localizable, Extensible, Maintainable and Sustainable (CLEMS). Instead of all the data being stored in a central monolithic database, the data stores are distributed across the Web Services. This leads to simpler schema and a more modular architecture. :

<http://ken.mit.edu/DevShell/DesktopDefault.aspx?tabindex=7&tab>

TikiFest is a variation of HackFest or CodeJam, see :

<http://jcwinnie.us/MT/archives/000118.html>

in tiki-eph.php and tiki-eph_admin.php files

\$pdate = mktime(23, 59, 59, \$_REQUEST'mon', \$_REQUEST'day',
\$_REQUEST'year'); should be \$pdate = mktime(0, 0, 0, \$_REQUEST'mon', \$_REQUEST'day',
\$_REQUEST'year');

working with knowledge is different than most other tasks and activities.

There must be trust, a desire to learn, some reflection and critique. You cannot speed knowledge exchanges by adding more people or providing more resources (typical project management strategies). Knowledge work depends on different drivers - identity, learning and meaning. :

<http://denham.typepad.com/km/2004/05/measurements.html>

XML in PHP5 — report from Int'l Conf :

http://www.phpn.de/?RSS_ID_ITEM=2649&IDENT=216.148.212.182

International PHP Conf began today :

http://www.phpn.de/?RSS_ID_ITEM=2629&IDENT=216.148.212.182

I added BRANCH-1-8 tag to phplayers, smartirc and wollabot modules

get all variables from smarty :

```
$smarty->get_template_vars();
```

or

```
{php}print_r($this->get_template_vars());{/php}
```

in a tpl

greetings !
