Introduction to UriWiki case study

Introduction to UniWiki case study

(Check also the information at *my personal page in tw.o*)

- All the information of our case study in the [UniWiki project](#) is available only in catalan, so far (you can use the free web translation services from University of Alacant ("Torsimany" project), at: <http://www.torsimany.ua.es/>).

Our goal and general info

- Test computer tools to help students and lecturers to cooperate writing documents for the learning/teaching field, with an increase of the efficiency and ease of developing their common tasks at university.
 - In the case of the students, we are testing whether they improve their efficiency to write group reports.
 - We we'll use for "efficiency", the marks of a report divided by the amount fo time invested to finish it; and compare it with blank cases (half the randomly selected students of the same classes to whom we will not allow them use the tool).
 - We got funding from the [Department of Universities, Research and Information Society](#) from the [Catalan Governement](#) in Spain.
- We also got a little bit more funding (and support) from the Institut of Education Sciences in our own University (<http://www.ub.edu/ice/>), for doing research with the use of Wikis as tools for tutoring the students individual or group work asinchronously (september'04-september'06).
 - Project started in January'04 and ends in September'05. September04 we'll start using wikis
 - More information, in the project's homepage: <http://uniwiki.ourproject.org>

The tools we'll test

So far we are interested in tesing:

Wiki

- a Wiki, and we'll probably use the one from tikiwiki.org  (at <http://uniwiki.ourproject.org>)

Web Folders (webdav) + Open Office .org (OOo)

- Web folders (using [dav or webdav protocol](#)) combined with [Open Office suite](#) version control capabilities.

Btw, very interesting the work done by Javier Reyes about integrating DAV support within Tiki!!! (see TikiDavDev)

Most of the teachers offered wiki support for the group work of their students. Some of us, also offered support for using OOo+WebDAV.

Training offered (open, so far 

- We have been offering some Wiki (with Tiki) and OOo+WebDAV trainging in different free courses for students (and everyone else interested that fits in the computer room  And we plan to give some more Tiki training (wiki use, and Tiki admini). If interested, check (and monitor  OpenTikiwikiTraining .

Subjects in which we'll try tools such as wiki

- [Click here](#)

Problems we have found, so far

- While evaluating our students group reports, in wiki pages, we lack to be able to see all changes made by a single author (already reported to [LearningManagementSystemDev](#)).

Publishing about Wiki use in Education field

(in descendent chronological order)

See our file gallery with **all our communications there** (either in pdf or OOo format)

1. "JORNADA ESPIRAL 2005 - Free and Innovative Educative Applications of the Information and Communication Technologies: resources and experiences": **Comparison of methods for collaborative writing for teaching and learning**. Xavier de Pedro Puente. Departament of Ecology. University of Barcelona.
 - Date: June 11th, 2005. Place: Barcelona, Espanya. [URL](#)
 - The results to the initial comparison among some computer tools to ease the collaborative writing of document were shown: **Wiki**, **Web Offimatics** (OOo + Web Folders or Webdav) and **BSCW**, respect to not using any specially designed ICT tool to ease such collaborative writing. The Wiki is pointed out to be the best option, for most of the requirements at writing documents for teaching/learning at university.
 - Written Communication, in **CATALAN** and [.pdf format](#) (134 Kb)
 - Oral Communication, in SPANISH:
 - [.pdf format 1x1](#) (1.77 Mb)
 - [.pdf format 4x1](#) (279.97 Kb)
 - [.sxi format 4x1](#) (1.14 Mb)
2. Oral Communication in **Edutec2004 Conference**: <http://edutec2004.lmi.ub.es/>. Held in Barcelona, Catalonia, Spain, in Spanish for the spanish speaking edutative community around the world. Friday 19/11/04.
 - Title: **Dedicación temporal del alumnado a trabajos en grupo usando Wikis en entornos libres de aprendizaje colaborativo u Ofimática Web: análisis de un caso en ciencias experimentales.**
3. I submitted a comunicacion for a International Conference (held in Girona, Spain, 30 June-1,2 July'04), mainly for Spanish speaker community; see <http://cidui.upc.es>), where I showed the uses of Wikis, as tools for collaborative writing in the education field (for students and lecturers), mainly University, but could also be used in Secondary School and Colleges, or course.
 - You'll find there information about the poster we're presenting at a conference, etc. You can also find some of the base information which we used to prepare the poster but in wiki format at: http://uniwiki.ourproject.org/tiki-index_raw.php?page=ComunicacionAbreviadaCIDUI2004Wiki (in Spanish, with a link at the bottom for the automatic translation to English)

Collaboration proposal for other conferences or papers in journals

Well, if you, reader, are interested in publishing your findings of the use of a wiki (tikiwiki or not) in the area of teaching and learning, please contact me at xavidp (a) bio.ub.es. I'm interested in publishing results of the use in education, since they will help to improve my CV and hopefully stabilise my position at university of any education centre (which I would love to ).

(Ok, no more time for the time being to report about our case study. More soon. )
