

Upgrade instructions

- backup your tiki files
- backup your tiki database
- get the tiki archive and extract it
- copy files over your existing tiki
- rerun ./setup.sh to make your all file/directory permissions are as needed
- done 🚫

Changes since 1.8.2

Bugs known to have been introduced

- PluginSQL with MSSQL stopped working, putting lib/tikidblib.php from 20040402 works again (reported [here](#) but in spanish). Not sure if that happens with more databases.

Security

- When an object is deleted, all objects of the same type lose custom permissions.

[Chealer9](#)

[+]

Revision 1.373.2.43 of tikilib.php fixes that bug with [this diff](#).

Resolved bugs and misbehaviors

- [Articles: Cannot add comment with zero-length body](#) fixed by [luci](#)
- [Image Galleries: fixed buggy image navigation](#) (it seems there's still some problem with cacheing on `tiki-browse_image.php` - after reload the navigation links get correct) [luci](#)
- [Mini-calendar Chealer9](#)
- [FAQs : Questions can't be edited \(invalid variable value for sort_mode\)](#) [Damian](#)
- [MSSQL support in tiki-install](#) [Damian](#)
- [MSSQL tiki.sql file - Still has problems with INDEXs](#) [Damian](#)
- [Made tiki-install IIS friendly](#) [Damian](#)
- [faq_questions, change of error message](#) [Damian](#)
- [tiki-modules, shouldnt be called directly as it gives path disclosure](#) [Damian](#)
- [patched phplayers for directory listing](#) [Damian](#)
 - worth noting that people should remove the demo files from here for added security !
- [Added better horizontal menu support for phplayers](#) [Damian](#)
 - note: the CSS file needs extra classes which can be found in `/lib/phplayers/sample code files!`
