

Release 1.7 occurred on 1st of august, 2003

Warning !

The following notes are kept for archive only, and should not be modified. Release process for 1.7.1 bugfix is now starting on
ReleaseProcess171

We have good feedback in SF forums about the reliability of the release
candidate : [SF Forums](#)

What is to be done / ongoing (will be in the 1.7 release)

[-]

- **#1 priority: write Installation documentation:** <http://tikiwiki.org/SysAdmin>
- **#2 priority: write Admin documentation:** <http://tikiwiki.org/TikiAdmin>
- **#3 priority: write Feature references:** <http://tikiwiki.org/FeatureX>
- improved themes (no more, only those that already exist)
- working PDF export **almost done**
 - Flo hacked that ! it is not finished we need help, contact mose if you can finish that work (php involved, but documented)
- Diego Zamboni's 3 [patches on Sourceforge](#)

- update language translations

[+]

- cn
- **cz** : luci is on that
- **de** : translated by ohertel (some TODOs still in there, if anyone has an idea / the time ...)
- **dk** : Martin Geisler (and Kim Nielsen ?)
- **en** : naturally updated
- **fr** : translated by sylvie
- he
- it
- **nl** : patvdv translated
- no
- pl
- po
- ru : zaufi will try to find smbd who can do this
- **sp** : jpgimenez, gmuslera
- **sr** : shinhan
- sw
- **tw** : zcecil
- (if you wish to help on translations, please add your name up here)

Still livingÂ bugs

[-]

- LeftCol/CenterCol dreadful bug
- mysterious automatic switching from imagemagick to gd without human intervention
 - Mose will track that chimera (didn't reproduce yet :/)
- erratic behaviour of tiki-user_assigned_modules.php freshly reported
 - please try to reproduce or to fix it anyone
 - the link http://tikiwiki.org/tiki-user_assigned_modules.php?unassign= is missing the module name at the end (teedog)
- Full xHTML compliance [test tikiwiki.org](http://test.tikiwiki.org) (completed with multiple checks, but extensive checks can find unfound errors, especially on admin pages that are hard to check with online validator)
- !@# in a search = Warning: sprintf(): too few arguments in /home/mose/var/tikicvs/lib/searchlib.php on line 85
- Filter function in Galaxia broken
- akwa not working
- (*please add more bugs to fix*)

What has been added since rc4 (and will be in

next one : finalÂ probably)

[+]

- Bugfixes

- fixed the find function in adminuser panel (mose)
- fixed bug where editing directory sites from a search query results in a mysql error (terence)
- fixed bug where tiki stores clear text passwords by default even when that option appears to be disabled by default (terence)
- fixed bug where tiki-install.php rejected all admin passwords, making reinstallation or upgrades impossible (terence)
- fixed bug where default values of the form are not correctly set after adding a dir categ on tiki-directory_admin_categories.php (terence)
- fixed bug where su (superuser) function doesn't work if you are logged in using the "remember me" feature (terence)
- fixed bug where current site theme is not selected on Admin/General: [bug #779640](#)
- fixed a bug in debugger [bug #779530](#) and [bug #779776](#) (zaufi, tomtom, mose)
- fixed bug in Live Support where msgs sent by operator to client are marked with client's username (terence)
- fixed bug where Live Support didn't work for clients who are logged in (terence)
- fixed error in Admin/General after setting home forum: bugs [#779586](#), [#780268](#) (terence)
- fixed bug where user email changes are not propagated in watches: [bug #780125](#) (terence)
 - perhaps in the future watches should just use the email in users_users and not duplicate

the email in tiki_user_watches

- fixed bug where comment area (comzone) takes 2 clicks to show the first time (terence)
- fixed bug where changing email prevents user from logging on again (terence)
- fixed bug where selecting "categorize this object" then clicking preview in wiki edit will cause the categorize checkbox to become deselected if the page is not already categorized (terence)
- fixed bug where admins can su to a user that doesn't exist (terence)
- fixed Smarty bugs related to smarty.request variables and register_globals setting (jjongsma and sylvie)
- the mini calendar and non-ascii characters used in translation of months and days (sylvie)
- Enhancements
 - tiki installer warns user if it fails to rename tiki-install.php (terence)
 - user is presented with link to installer if tiki fails to connect to db (terence)
 - "admin" user can no longer be removed from tiki-adminuser.php (terence)
 - all RSS feeds are converted to UTF-8. If you have iconv or recode even japanese fonts could be displayed! (jpgimenez)
 - changed name field maxlength from 20 to 200 for tiki_dsn, tiki_extwiki, tiki_menu_options, tiki_menus in database (mose)
 - much more informative and user-friendly Tiki installer (terence)
- New stuff
 - CATORPHANS plugin that displays uncategorized objects (terence)
 - currently only displays wiki pages; cannot be configured; very much a work in progress

- (*please add more bugs to fix*)

What has been added since rc3 (and is inÂ rc4)

[+]

- user hash generated from password only bug: #772568 (terence)
- bad category link for articles: #760860 (terence)
- modules added
 - mod-who_is_there : gathers both the others, plus more
 - mod-search_wiki_page : points to the find function in wiki listpages
- plugin added
 - {CATEGORY()} is done, for more categories relevance. (ohertel and mose)
- *Tiki Debugger Console* introduced by zaufi.
 - Hacked from the Matrix by mose.
 - should work in all styles (verify)
- Improved wiki edit conflict detection on tiki-editpage.php load (alert string needs to be made translatable) (terence)

For 1.8

[+]

- DB abstraction and rebuild
 - Flo branched the CVS to rewrite all sql queries. I bet help would be welcome.
 - http://www.tiki.org/tiki-index_raw.php?page=DbAbstractionDev
- Wiki parser based on FSM
- next star

- Which star will give its name to the 1.8 version ?
- improved irc_log feature
 - Ross work on it, admin page coming
- adodb integration
 - Rasa again !
- Category-based permissions
 - groups can only view categorized Tiki objects if they are granted permission for that category
- Category-based name space for wiki pages
 - no collision between wiki page names between categories [NonStrictHierarchicalNameSpaces](#)
- Extended INCLUDE plugin, at least extending to articles
- IMAP WebMail client support
- fix arbitrary character limits in db, like wiki pageName in the wiki attachment table
- [Integration with map server](#)
- (*what else ?*)
 - ...

What if I want to run on the branch to hunt bugsÂ ?

[\[-\]](#)

- You have access to cvs but don't catch a word about trees and branches ? no panic.

- if you use dev cvs and don't change anything, you'll stick on the trunk.
- to be able to work on a branch : create it with a new chackout:
`cvs -d:devname:@cvs.sf.net:/cvsroot/tikiwiki co -r release_eta_carinea_rc1 tiki`
(then you'll have the branch)
- work with the branch as normal, the branch flag is sticky.
