Released on August 20,Â 2003

- ReleaseNotes171

Warning !

The following notes are kept for archive only, and should not be modified (unless there is something missing from the changelog).
Release process for 1.7.2 bugfix is now starting on ReleaseProcess172

1.7.1 bugfix releaseÂ process

The branch **release_eta_carinea_rc1** (so badly named 🤨) is now the CVS branch for 1.7.x. ***Note that the 1.7.x branch is strictly for bugfixes.*** All new features and changes must be committed to CVS HEAD and not the **release_eta_carinea_rc1** branch. Fixes committed to the 1.7.x branch will be merged into HEAD.

When fixing bugs, fix the bug on **release_eta_carinea_rc1** then merge with **HEAD**. Follow the instructions at the bottom of TikiCVSTags to merge.

Developers, please update this page whenever you resolve a bug in this branch. If you need help with CVS, read Cvs17.

If you are not a developer but would like to help test the latest 1.7.1 code, download the following archive, updated every 8 hours from CVS:
http://tikiwiki.org/devtiki-1.7.1.tar.bz2

1.7.1 is tentatively schedule for Wednesday of this week.

Unresolved bugs orÂ misbehavior

(italicized items probably will **not** be addressed in 1.7.1; that doesn't mean you cannot tackle them though)

- *one sometimes (rarely) sees modules and module links that belong to another user viewing the site at the same moment*
- *changes to modules and admin settings sometimes require a page reload to appear*
- *left/center column sometimes takes up width of the screen: it occurs randomly*
- *the quiz feature may exhibit strange behaviour*
- the poll feature does not record votes; a patch will be released asap **cannot reproduce**
- the chatroom sometimes causes browser to continue to refresh even after leaving
- the site search function may give errors with Chinese or other Asian characters - **fixed?**
- the mini calendar may display wrong with non-ascii characters used in translation of months and days
- *the "Go Back" link on error pages sometimes fails in IE (after a POST or GET to same file)*
- various theme problems with different browsers
- *tiki-user cookie logs user into all Tiki sites running under the same domain if user has same username/password*
- *installer does not take into account PHP safe_mode <-- can this be done? ini_get() doesn't seem to get the safe_mode value*
- Tiki running in Windows (and specifically IIS?) generate links that have an erroneous "/" before

the URL parameter: ex. tiki-browse_image.php/?imageId=2

- *comment hash is title+content, making it impossible to post 2 comments with the same title and content, an uncommon but certainly possible and legitimate situation*
- **Please see http://sourceforge.net/tracker/?group_id=64258&atid=506846 for more possible bugs**

Resolved bugs and misbehavior sinceÂ 1.7

- fixed bug where special chars in site search resulted in warning notices (sylvie)
- fixed smtp error on tiki-webmail.php: bug #759332
- language : ru (zaufi), nl (sylvie), da (gimpster) and de (ohertel) updated
