Release 1.9 rc1

released on monday 21st june

Known Issues

- tiki-install.php spits out many "variable undefined" errors (they are not critical; Tiki will install and work fine).
- tiki-admin_categories.php's category browser is bugged when adding many levels of subcategories.
- Tiki's search engine does not respect permissions.
- Tiki uses too many cookies; problems arise when one exceeds the browser's limit on number of cookies per domain.
- The lib/webmail/pop3.php library is GPL'ed. Should replace with an LGPL library like Net_POP3 or Net_IMAP.
- Replies to **replies** to forum topics are hidden when viewing forum topics (avoid using the forum).

IrcHook

mose *2004/05/02 23:19 :* (MOD) * Added 'add' function to tikibot with IrcHook trick

Bugs fixed

- Remove a hardcoded courier font selection for monospaced Wiki text and just use a tt tag pair.
- Change parse_data to properly recognize a .. .page. .. marker. Without this change, lists and div's were not being properly closed out.
- Change some hardcoded

  and

  ---

  tags to be the XHTML compatible form (

  and

).
- Parse absolute URI correctly in group home page setting
- Avoid sending user back to registration page on first login
- spreaded javascript protection for delete direct links (musus)
- Fixed case of missing end quotes in the admin menus tpl file Damian

  also in the same file around the x delete icon was nasty characters from a windows editor! Let that be a warning to all!

  make sure you check your editor is compatible with the Tikiwiki CVS
- Fixed the repeated Re's in the tiki forums when use reply to post Damian
- XHTML validation
  - Global replacement of

    and

    to

    - Damian
  - backlinks on wiki page (form) Damian
  - smarty function: jspopup (onclick tweakd) Damian
  - tiki-show_page - fixed stray table cell marker and added alt tags Damian
- no more .tmp files generated in the system root dir halon
