

Sorry, for this english, feel free to render it more academic.  
Don't complain, I could write french

## General Description

---

tikiwiki provides a lot of notifications.

A lot of tikiers are moving and could appreciate to get such notifications on cell phone / mobile / handy / portable / (*put other names here*)

That is not for free,  
the charges can go to the system down to the user

## Key Function and sub-features

---

Port the existing mail notifications to SMS,  
should also be smartly made (160 chars)

## Related Links

---

Should use [PEAR::Net\\_SMS](#) (LGPL)

toggg: I'm Dartagnan from the "4 mousquetaires" maintaining it by PEAR  
My fellows are [Horde](#)'s members.

## Typical Uses

---

Everywhere a notification can be sent: wikis changes (watches), comments, forum ...

## Case Studies

---

Please, give here some real cases, simple and simple described

- when I write a wiki, I want to know immediatly any change on it.
- ...

## Bugs

---

he he 🇧🇪

## Support Requests

---

tikidevs well accounted with which ever notifications

## TikiTeam

---

toggg, *put your tw.o id here*  
[Marc Laporte](#)
