Overview

Here is a set of *cool solutions* â€” smth what you made with/for Tiki and you want to share with others. This stuff isn't officially supported â€” it just worked for someone, and they shared. Take a look and see if it works for you too.

CVS commmitsÂ logger

24-Oct-2003 by zaufi

My solution developed to update CVS commits info on my intranet Tiki site used as groupware tool in developers team. Follow the instructions to get reslut

1. Attached script (tikilogger) should be placed into $CVSROOT/CVSROOT of your CVS server
2. Add one or more lines into loginfo file for every project (module) you want to have commit info for. Assume you have 2 modules in your CVS: libMy and MEGA-project â€” then add the following

   ---

   libMy /bin/bash $CVSROOT/CVSROOT/tikilogger %{sVv} libMy MEGA-project /bin/bash $CVSROOT/CVSROOT/tikilogger %{sVv} MEGA-project
3. Fix *tikilogger* script and set *toaddress* variable according you mail-in account

   Note: This work for 1.8 CVS version only because **PREPEND** mail-in method used, but of couse you can fix it and use **APPEND** instead

P.S.

Feel free to add yours solutions here 😃
