sIFR

Get pretty headers like this

· Download sIFR
· Find a font that's been squished down to to a .swf
· Stick this into sIFR-config.js

```
var htfont = {src: 'fontNAME.swf'}; sIFR.activate(htfont); sIFR.replace(htfont, {selector: 'h1'});
```

· Do change fontNAME to the name of your font. And twiddle with it if you wish to replace more than just h1's
· ftp up sIFR, sIFR-config and your font to public_html or your tiki root
· Add this to your footer.tpl (opening "<" removed from lines to let me post it. Do stick them back)

```
script src="sifr.js" type="text/javascript"> script src="sifr-config.js" type="text/javascript">
```

Ta-Da; I hope.
